INVESTOR DECK

The Missing Layer in Institutional Decision-Making

Institutions already have data, experts, and software. What they still lack is a governed system that produces coherent narrative judgment under uncertainty.

INSTITUTIONAL DECISION LAYER • NOT ANOTHER ANALYTICS TOOL

DECISION CHAIN

DATA SOURCES
Reports, feeds, signals, internal documents

ANALYSIS TOOLS
BI, models, dashboards, external research

BROKEN MIDDLE
Human synthesis bottleneck under pressure

PROBLEM

The Problem Is Coherence, Not Collection

Institutions misread fast-moving environments because interpretation is spread across decks, memos, analysts, vendors, and competing internal narratives.

OPERATIONAL FAILURES

- Inputs are fragmented across internal and external systems.
- Executive teams receive conflicting interpretations with weak traceability.
- Critical decisions slow down or default to the loudest narrative.
- The cost shows up as delay, misalignment, and reversible mistakes made too late.

PRESSURE OBJECTS

DELAY

Decision windows close before consensus forms.

CONFLICT

Multiple internal reads compete without adjudication.

NO ACCOUNTABILITY

Judgment is separated from evidence and edit history.

COMPETITION

Existing Solutions Do Not Solve the Decision Layer

Dashboards organize data, consultancies package opinions, and LLM tools generate text. None creates a durable, governed narrative system inside the institution.

COMPETITIVE READ

CATEGORY	NARRATIVES	TRACEABILITY	ALT PATHS	GOVERNANCE	MEMORY
Dashboards / BI	No	Some			

PRODUCT

Inception Gate Is Narrative Intelligence Infrastructure

A narrative computation engine that turns fragmented evidence into structured, auditable, decision-grade narratives.

SYSTEM

INPUTS

INTERNAL SOURCES

Memos, briefings, reports, analyst notes

INPUTS

EXTERNAL SOURCES

Feeds, policy, regulatory, market, research

COMPUTATION

NARRATIVE ENGINE

Entities, claims, pressures, contradictions, scenarios

GOVERNANCE

REVIEW LAYER

Confidence logic, approvals, edit history, auditability

WORKFLOW

What the Product Actually Does

The product operationalizes institutional synthesis from input collection through reviewed narrative output.

PROCESSING FLOW

01

INGEST

Pull documents, feeds, and analyst inputs into a governed evidence layer.

02

STRUCTURE

Classify entities, themes, claims, time horizons, pressures, and conflicts.

03

COMPUTE

Detect narrative shifts, broken assumptions, and plausible alternate paths.

04

GENERATE

Create briefs, signal grids, alerting, and action-oriented summaries.

EXPERIENCE

From Fragmented Inputs to Decision-Grade Output

Users do not interact with a chatbot. They operate a governed workflow that shows what changed, why it matters, where uncertainty sits, and what to do next.

PERSONA FLOW

ANALYST

Reviews evidence clusters and proposed narrative shifts.

MANAGER

Compares primary and alternate paths with trigger logic.

EXECUTIVE

Receives compressed briefs tied to evidence and action.

USER RESULT

- Faster refresh after major new inputs.
- Fewer conflicting versions of the operating read.
- Clear evidence binding for audit and trust.
- Institutional memory that compounds each decision cycle.

CUSTOMERS

First Paying Customers and Initial ICPs

The first customer is not every enterprise. It is the institutional team already paying to reduce ambiguity in high-stakes environments.

INITIAL ICPS

ENTERPRISE STRATEGY

Buyer: CSO / CRO
User: strategy, risk, chief of staff teams

FINANCIAL INSTITUTIONS

Buyer: CRO / Head of Investment Risk
User: policy, macro, risk, CIO office

PUBLIC SECTOR

Buyer: program executive / intelligence lead
User: analysts, policy staff, briefing teams

LIKELY FIRST BUYER

PROFILE

Head of Geopolitical Risk or CSO-sponsored strategy lead with active ambiguity costs and discretionary budget.

BUDGET SOURCE

PILOTS

Real Pilot Programs, Not Innovation Theater

The wedge is a paid institutional pilot with clear inputs, outputs, metrics, and a conversion path to annual platform adoption.

FIRST SELLABLE PACKAGE

OFFER
Narrative Intelligence Pilot

SCOPE
One decision domain • one sponsor • 5-15 primary users

PRICE
$200K-$400K for 6-12 weeks

CONVERSION
$500K-$1.5M annual platform contract

CONVERSION THRESHOLDS

- Used in at least one live executive or committee workflow by week 4-6.
- Brief preparation time drops by at least 30%.
- Customer continues using outputs without founder hand-holding.

GTM

Founder-Led, High-Trust, Narrow Wedge

Go-to-market starts with founder-led sales into a small number of high-value institutional accounts, then expands by workflow and operating surface.

SALES MOTION

QUALIFY

2-4 weeks to confirm sponsor urgency and bounded scope.

CLOSE PILOT

6-10 weeks when budget and alignment exist.

CONVERT

4-9 months from pilot start to annual platform.

EXPAND

Risk -> strategy -> regulatory -> board prep.

ENTRY WEDGE

- Start with one domain where fragmented interpretation already creates visible cost.
- Deliver outputs inside an existing executive or committee cadence.
- Sell against existing strategy, risk, intelligence, and advisory budgets.

MARKET

Market Logic: Where the Budget Comes From

This is a budget reallocation story before it becomes a new budget category.

BOTTOM-UP ACCOUNT LOGIC

125
Global enterprises with concentrated geopolitical, regulatory, or strategy complexity

75
Regulated financial institutions with active policy and market interpretation needs

25-50
Public-sector or quasi-public strategic programs with senior briefing requirements

10
Converted accounts at ~$750K blended ACV create a credible early company

BUDGET SOURCES

ADVISORY
External consulting and intelligence spend

MOAT

Why This Wins: Compounding Defensibility

Defensibility comes from structure, workflow embedding, and institutional learning loops, not from model access alone.

MOAT LAYERS

DATA MODEL

Narrative ontology and evidence graph bind claims to sources and outcomes.

WORKFLOW

Embedded into recurring executive, risk, and strategy operating cadence.

INSTITUTIONAL EMBEDDING

Becomes the record of how the institution interprets change.

LEARNING LOOPS

Reviewed narratives and outcomes improve future system behavior.

SWITCHING COST

Replacing the platform means losing decision history, trust, and structured memory.

IP DIRECTION

ROADMAP

Roadmap from Seed to Series A

Seed funds product hardening and repeatable commercial proof. Series A requires institutional conversion and durable workflow behavior.

BUILD PATH

TODAY

MVP supports ingestion, structured narrative generation, review workflow, and premium outputs.

WITH $6M

Harden governance, domain models, integrations, deployment reliability, and pilot execution.

SERIES A GATE

Repeatable pilot conversion, multi-account ACV growth, and embedded workflow retention.

18-24 MONTH PROOF

- 3-5 paid pilots completed successfully
- 2-3 meaningful annual contracts converted
- $1.5M-$3M in contracted ARR or ARR-equivalent value
- Clear ACV expansion within accounts

CAPITAL

Use of Funds: What $6M Unlocks

The capital is not for broad scaling. It is for building the product and commercial proof required to make institutional adoption undeniable.

ALLOCATION

45%
Product and engineering

20%
Pilot delivery and implementation

20%
Key hires

15%
GTM and design-partner development

CAPITAL UNLOCKS

PRODUCT HARDENING
Move from MVP to institutional pilot-grade reliability.

TEAM + RISK

Team, Milestones, and the Hard Truth

This company works only if the team can unite institutional judgment, narrative design, and production AI systems into a trusted operating layer.

REQUIRED TEAM SHAPE

INSTITUTIONAL OPERATOR

Knows how real organizations decide under pressure.

AI SYSTEMS BUILDER

Can build governed production systems, not toy AI features.

NARRATIVE PRODUCT ARCHITECT

Can turn executive-grade synthesis into software infrastructure.

WHAT MUST BE TRUE / WHAT KILLS IT

MUST BE TRUE

Paying references, converted contracts, workflow retention, measurable decision impact.

KILLS THE COMPANY

Low trust, non-converting pilots, or a product that collapses back into services.
