INVESTOR DECK

The Missing Layer in Institutional Decision-Making

Institutions already fund data, software, and expert analysis. They still lack a governed system that turns fragmented signal into decision-grade narrative judgment.

INSTITUTIONAL DECISION LAYER • NOT ANOTHER ANALYTICS TOOL

DECISION CHAIN

SIGNAL INPUTS
Reports, feeds, analyst notes, internal documents

→

TOOL LAYER
BI, models, dashboards, external research, fragmented software

→

BROKEN MIDDLE
Human synthesis bottleneck under pressure, conflict, and time compression

→

DECISION LAYER
Governed narrative judgment tied directly to executive action

CORE CLAIM
Narrative failure, not data scarcity, is the institutional bottleneck.

IMPLICATION
Whoever owns institutional synthesis owns the decision layer.

WHY IT MATTERS
The budget already exists. The operating layer does not.

PROBLEM

The Problem Is Coherence, Not Collection

Institutions do not fail because signal is missing. They fail because interpretation is fragmented across tools, teams, vendors, and disconnected narrative artifacts.

OPERATIONAL FAILURES

- Inputs are fragmented across internal and external systems.
- Executive teams receive conflicting reads with weak evidence traceability.
- Critical decisions slow down or default to the most forceful internal story.
- The cost appears as delay, misalignment, and expensive reversals.

PRESSURE OBJECTS

DELAY
Decision windows close before consensus forms.

CONFLICT
Multiple internal reads compete without adjudication.

NO ACCOUNTABILITY
Judgment is separated from evidence and edit history.

POOR MEMORY
Institutions forget how previous decisions were framed.

COMPETITION

Existing Solutions Do Not Solve the Decision Layer

Dashboards organize data. Consultants sell episodic interpretation. Generic AI generates language. None becomes a governed narrative system inside the institution.

COMPETITIVE READ

CATEGORY	NARRATIVES	TRACEABILITY	ALT PATHS	GOVERNANCE	MEMORY
Dashboards / BI	No	Some	No	No	No
Consultancies	Yes	Weak	Rare	No	Episodic
Generic Copilots	Text only	Weak	No	No	No
Inception Gate	Yes	Yes	Yes	Yes	Yes

WHY INCUMBENTS FAIL

DASHBOARDS
Summarize metrics without adjudicating contested meaning.

CONSULTANTS
Deliver episodic narratives that do not compound internally.

COPILOTS
Generate language without institutional structure or control.

PRODUCT

Inception Gate Is Narrative Intelligence Infrastructure

A governed narrative computation engine that converts fragmented evidence into structured, auditable, decision-grade institutional output.

SYSTEM

INPUTS

INTERNAL
Memos, briefings, reports, analyst notes

EXTERNAL
Feeds, policy, regulatory, market, research

USER LAYER
Hypotheses, annotations, watchlists, decision criteria

NARRATIVE COMPUTATION

STRUCTURE
Entities, claims, themes, time horizons, contradictions

COMPUTE
Narrative state, pressure shifts, alternative paths, broken assumptions

GOVERN
Confidence logic, approvals, edit history, auditability

DECISION OUTPUTS

OPERATING SURFACES
Executive briefs, alerts, scenario paths, monitoring strips

INSTITUTIONAL MEMORY
Reviewed outputs, decision logs, outcome-linked narrative history

WHAT IT MEANS

- Not a dashboard tool.
- Not a data platform.
- Not an LLM wrapper.
- The decision layer for governed institutional synthesis.

WORKFLOW

What the Product Actually Does

The product operationalizes synthesis from fragmented evidence to reviewed narrative output inside a repeatable institutional workflow.

PROCESSING FLOW

01
INGEST
Pull documents, feeds, and analyst inputs into a governed evidence layer.

02
STRUCTURE
Classify entities, themes, claims, time horizons, pressures, and conflicts.

03
COMPUTE
Detect narrative shifts, broken assumptions, and plausible alternate paths.

04
GENERATE
Create briefs, signal grids, alerting, and action-oriented summaries.

05
REMEMBER
Store reviewed outputs, edits, and outcomes for institutional memory.

OUTPUT SET

EXECUTIVE BRIEF
What changed, why it matters, where risk concentrates, what to do now.

SCENARIO PATHS
Primary and alternate paths with triggers, confidence, and implications.

DECISION LOG
Institutional memory tied to evidence, review, and outcome.

EXPERIENCE

From Fragmented Inputs to Decision-Grade Output

Users do not interact with a chatbot. They operate a governed workflow that resolves what changed, why it matters, where uncertainty sits, and what action follows.

PERSONA FLOW

ANALYST

Reviews evidence clusters and proposed narrative shifts.

MANAGER

Compares primary and alternate paths with trigger logic.

EXECUTIVE

Receives compressed briefs tied to evidence and action.

USER RESULT

- Faster refresh after major new inputs.
- Fewer conflicting versions of the operating read.
- Clear evidence binding for trust and audit.
- Institutional memory that compounds every decision cycle.

First Paying Customers and Initial ICPs

The first customer is not broad enterprise IT. It is the institutional team already carrying ambiguity cost inside a recurring high-stakes decision cycle.

INITIAL ICPS

ENTERPRISE STRATEGY

Buyer: CSO / CRO
User: strategy, risk, chief of staff teams
Pain: board and executive decisions run on fragmented market, policy, and competitor reads.

FINANCIAL INSTITUTIONS

Buyer: CRO / Head of Investment Risk
User: policy, macro, risk, CIO office
Pain: capital, exposure, and allocation calls require continuous interpretation under volatility.

PUBLIC SECTOR

Buyer: program executive / intelligence lead
User: analysts, policy staff, briefing teams
Pain: senior briefings must compress fast-moving inputs without losing traceability or accountability.

LIKELY FIRST BUYER

PROFILE

Head of Geopolitical Risk or CSO-sponsored strategy lead with active ambiguity costs and discretionary budget.

BUDGET SOURCE

Strategy, risk, intelligence, compliance, or external advisory reallocation.

URGENCY

Highest when volatility compresses executive decision windows.

Real Pilot Programs, Not Innovation Theater

The first sale is a paid pilot tied to one live decision cadence, one accountable sponsor, and outputs that enter recurring executive workflow.

FIRST SELLABLE PACKAGE

OFFER
Narrative Intelligence Pilot

SCOPE
One decision domain • one sponsor • 5-15 primary users

PRICE
$200K-$400K for 6-12 weeks

CONVERSION
$500K-$1.5M annual platform contract

PILOT PROGRAM BOARD

GEOPOLITICAL RISK BRIEFING
Weekly narrative brief, trigger watchlist, executive update pack
8-12 WEEKS • EXECUTIVE CADENCE

STRATEGY DECISION SUPPORT
Scenario paths, assumption tracking, committee briefing materials
6-10 WEEKS • DECISION FORUM

REGULATORY INTERPRETATION
Signal monitoring, impact briefs, escalation log
6-12 WEEKS • MONITORING CADENCE

CONVERSION GATE
Live workflow usage by week 4-6, 30%+ prep-time reduction, adjacent expansion
ANNUAL PLATFORM TRIGGER

GTM

Founder-Led, High-Trust, Narrow Wedge

Go-to-market begins with founder-led sales into a small set of high-value institutional accounts, then expands by workflow depth and operating surface.

SALES MOTION

QUALIFY
2-4 weeks to confirm sponsor urgency and bounded scope.

CLOSE PILOT
6-10 weeks when budget and alignment exist.

CONVERT
4-9 months from pilot start to annual platform.

EXPAND
Risk -> strategy -> regulatory -> board prep.

ENTRY WEDGE

- Start with one domain where fragmented interpretation already creates visible cost.
- Deliver outputs inside an existing executive or committee cadence.
- Sell against existing strategy, risk, intelligence, and advisory budgets.
- Expand by adjacent workflows, stakeholder groups, and domain packages.

Market Logic: Where the Budget Comes From

This is a budget reallocation story before it becomes a new software line item.

BOTTOM-UP ACCOUNT LOGIC

125
ENTERPRISE BEACHHEAD
Global enterprises with concentrated geopolitical, regulatory, or strategy complexity
INITIAL NAMED-ACCOUNT UNIVERSE

75
FINANCIAL INSTITUTIONS
Regulated institutions with active policy, market, and exposure interpretation needs
EXISTING HIGH-COST AMBIGUITY BUDGETS

25-50
PUBLIC PROGRAMS
Public-sector and quasi-public strategic programs with senior briefing requirements
HIGH-VALUE CONSTRAINED DEPLOYMENTS

10
SERIES A SUPPORT CASE
Converted accounts at roughly $750K blended ACV support a credible early institutional software company
PROOF BEFORE SCALE

BUDGET SOURCES

ADVISORY
External consulting and intelligence spend

WORKFLOW
Strategy, research, risk, and policy tooling

HEADCOUNT
Analyst augmentation and manual synthesis cost

Why This Wins: Compounding Defensibility

Defensibility comes from structured narrative systems embedded in workflow and improved through institutional learning loops, not from model access.

MOAT LAYERS

DATA MODEL
Narrative ontology and evidence graph bind claims to sources and outcomes.

WORKFLOW
Embedded into recurring executive, risk, and strategy operating cadence.

INSTITUTIONAL EMBEDDING
Becomes the record of how the institution interprets change.

LEARNING LOOPS
Reviewed narratives and outcomes improve future system behavior.

SWITCHING COST
Replacing the platform means losing decision history, trust, and structured memory.

IP DIRECTION

- Narrative state modeling
- Evidence-to-claim traceability
- Conflict and alternative-path computation
- Governance-grade audit architecture

Roadmap from Seed to Series A

Seed funds product hardening and commercial proof. Series A requires repeatable conversion, embedded workflow usage, and expanding contract value.

BUILD PATH

TODAY
MVP supports ingestion, structured narrative generation, review workflow, and premium outputs.

WITH $6M
Harden governance, domain models, integrations, deployment reliability, and pilot execution.

SERIES A GATE
Repeatable pilot conversion, embedded workflow retention, and multi-account ACV growth.

18-24 MONTH PROOF

- 3-5 paid pilots completed successfully
- 2-3 meaningful annual contracts converted
- $1.5M-$3M in contracted ARR or ARR-equivalent value
- Clear ACV expansion within accounts

Use of Funds: What $6M Unlocks

This capital buys proof, not experimentation. It hardens the platform, funds live pilots, and produces the commercial evidence required for the next round.

ALLOCATION

45%
Product and engineering

20%
Pilot delivery and implementation

20%
Key hires

15%
GTM and design-partner development

CAPITAL UNLOCKS

PRODUCT HARDENING
Governance, reliability, and deployment quality required for institutional use.

PILOT THROUGHPUT
3-5 live deployments with reusable delivery motion and reference value.

SERIES A EVIDENCE
Converted contracts, retained workflow usage, and expanding ACV investors can underwrite.

Why This Founder

Marques Anderson sits at the intersection of systems, strategy, and institutional decision-making. Inception Gate comes from repeated exposure to the same structural failure: institutions collect signal faster than they can turn it into coherent judgment.

MARQUES ANDERSON | FOUNDER

Worked across strategy and consulting environments shaped by Fortune 50 operating realities, where decisions move through layered institutional constraints rather than clean analytical models.

Saw the same failure repeatedly: abundant data, fragmented interpretation, slow internal coherence, and expensive decision drift under pressure.

Built conviction around how decisions are actually made across operations, policy, and economic systems, not how they are summarized in reporting decks.

Inception Gate is the direct response to that pattern: the missing layer that structures interpretation before ambiguity becomes operational cost.

UNIQUE ADVANTAGE

SEES THE PROBLEM DIFFERENTLY

Approaches the market from an institutional and systems perspective, with attention to how decisions behave under real-world constraint, not idealized process maps.

CAN BUILD THE SOLUTION

Combines strategy, systems thinking, and cross-domain synthesis to turn ambiguity into usable frameworks, with proprietary narrative-intelligence methods and patent direction behind the platform.

UNFAIR ADVANTAGE

Not building tools. Building decision infrastructure. Not analyzing data. Structuring interpretation so institutions can act with clarity under uncertainty.
